

Runway Safety

A runway incursion is defined by the FAA as any occurrence at an airport involving an aircraft, vehicle, person or object on the ground that creates a collision hazard or results in the loss of separation with an aircraft taking off, intending to take off, landing or intending to land.

Pilot factors that may result in a runway incursion include not understanding ATC clearances, inadequate signage and markings or a loss of situational awareness. Education and awareness of all pilots is key to component improvement to this critical air safety problem.

Directions: We will meet in the Northwest Flyers Hangar. To reach the Hangar, go in the main entrance (same as Pilot Pete's) go down the stairs and follow the hallway signs to the hangar. If you are flying in follow the line attendant for parking.

A message from the National FAASTeam Manager

Over 10,150 AMTs earned an AMT Award last year. Will you, this year?
